

Coronavirus disease (COVID-19)

Situation Report – 137

Data as received by WHO from national authorities by 10:00 CEST, 05 June 2020

Highlights

At the [media briefing on COVID-19](#) today, WHO Director-General Dr Tedros announced [updated guidance on the use of masks](#) for the control of COVID-19. This guidance is based on evolving evidence, and provides updated advice on who should wear a mask, when it should be worn and of what it should be made. There is further guidance for the public available [here](#).

Digital tools offer opportunities to strengthen contact tracing for COVID-19. WHO has published [interim guidance](#) on considerations, opportunities and challenges of integrating digital tools into contact tracing methods.

WHO has published [interim guidance for the poliomyelitis \(polio\) surveillance network in the context of COVID-19](#). One of its aims is to highlight the decision-making framework to guide the level of polio surveillance activities at country level in the context of the ongoing pandemic.

A nurse who was infected with, and recovered from, COVID-19 in Austria [shares his experience](#) and how he uses this experience to lift the spirits of his patients, colleagues, and friends who have been affected by COVID-19.

Since the beginning of the COVID-19 pandemic, air passenger and cargo services have been severely disrupted. To address the impact of the pandemic, the International Civil Aviation Organization has published 'Take-off: Guidance for Air Travel through the COVID-19 Public Health Crisis'. For more information, see '[Subject in Focus](#)' below.

Situation in numbers (by WHO Region)

Total (new cases in last 24 hours)

Globally	6 535 354 cases (118 526)	387 155 deaths (4 288)
Africa	121 104 cases (5 465)	2 958 deaths (100)
Americas	3 084 517 cases (61 693)	172 276 deaths (3 723)
Eastern Mediterranean	587 030 cases (17 004)	13 720 deaths (262)
Europe	2 230 706 cases (19 558)	182 165 deaths (-143)
South-East Asia	322 863 cases (13 266)	8 942 deaths (332)
Western Pacific	188 393 cases (1 540)	7 081 deaths (14)

Subject in Focus: Take-off: Guidance for Air Travel through the COVID-19 Public Health Crisis

The COVID-19 pandemic has had a significant impact on global air transport. The International Civil Aviation Organization (ICAO) estimates that global passenger traffic at airports will decrease by 50 per cent in 2020, compared to 2019 figures - with up to 71 per cent reduced seat capacity and up to 1.5 billion fewer passengers globally. According to ICAO, airlines and airports face a potential loss of revenue of up to US\$ 314 billion and US\$ 100 billion respectively, for 2020.

ICAO's Council Aviation Recovery Task Force (CART) was established on 9 March 2020 to address the challenges of COVID-19 and to provide global guidance for a safe, secure and sustainable restart and recovery of the aviation sector. This task force is composed of representatives from Member States and international, regional and industry organizations, including WHO and the World Tourism Organization (UNWTO).

The task force has recently published '[Take-off: Guidance for Air Travel through the COVID-19 Public Health Crisis](#)', a document that lays out a set of measures aimed at reducing health risks to air travellers, aviation workers, and the general public.

The document provides a framework for addressing the impact of the COVID-19 pandemic on the global aviation transportation system and is divided in two sections.

The first section contains risk mitigation measures that apply generally to air passenger and cargo transport, such as: public education, physical distancing, face covering and masks, routine sanitation, health screening, contact tracing, health declarations and testing.

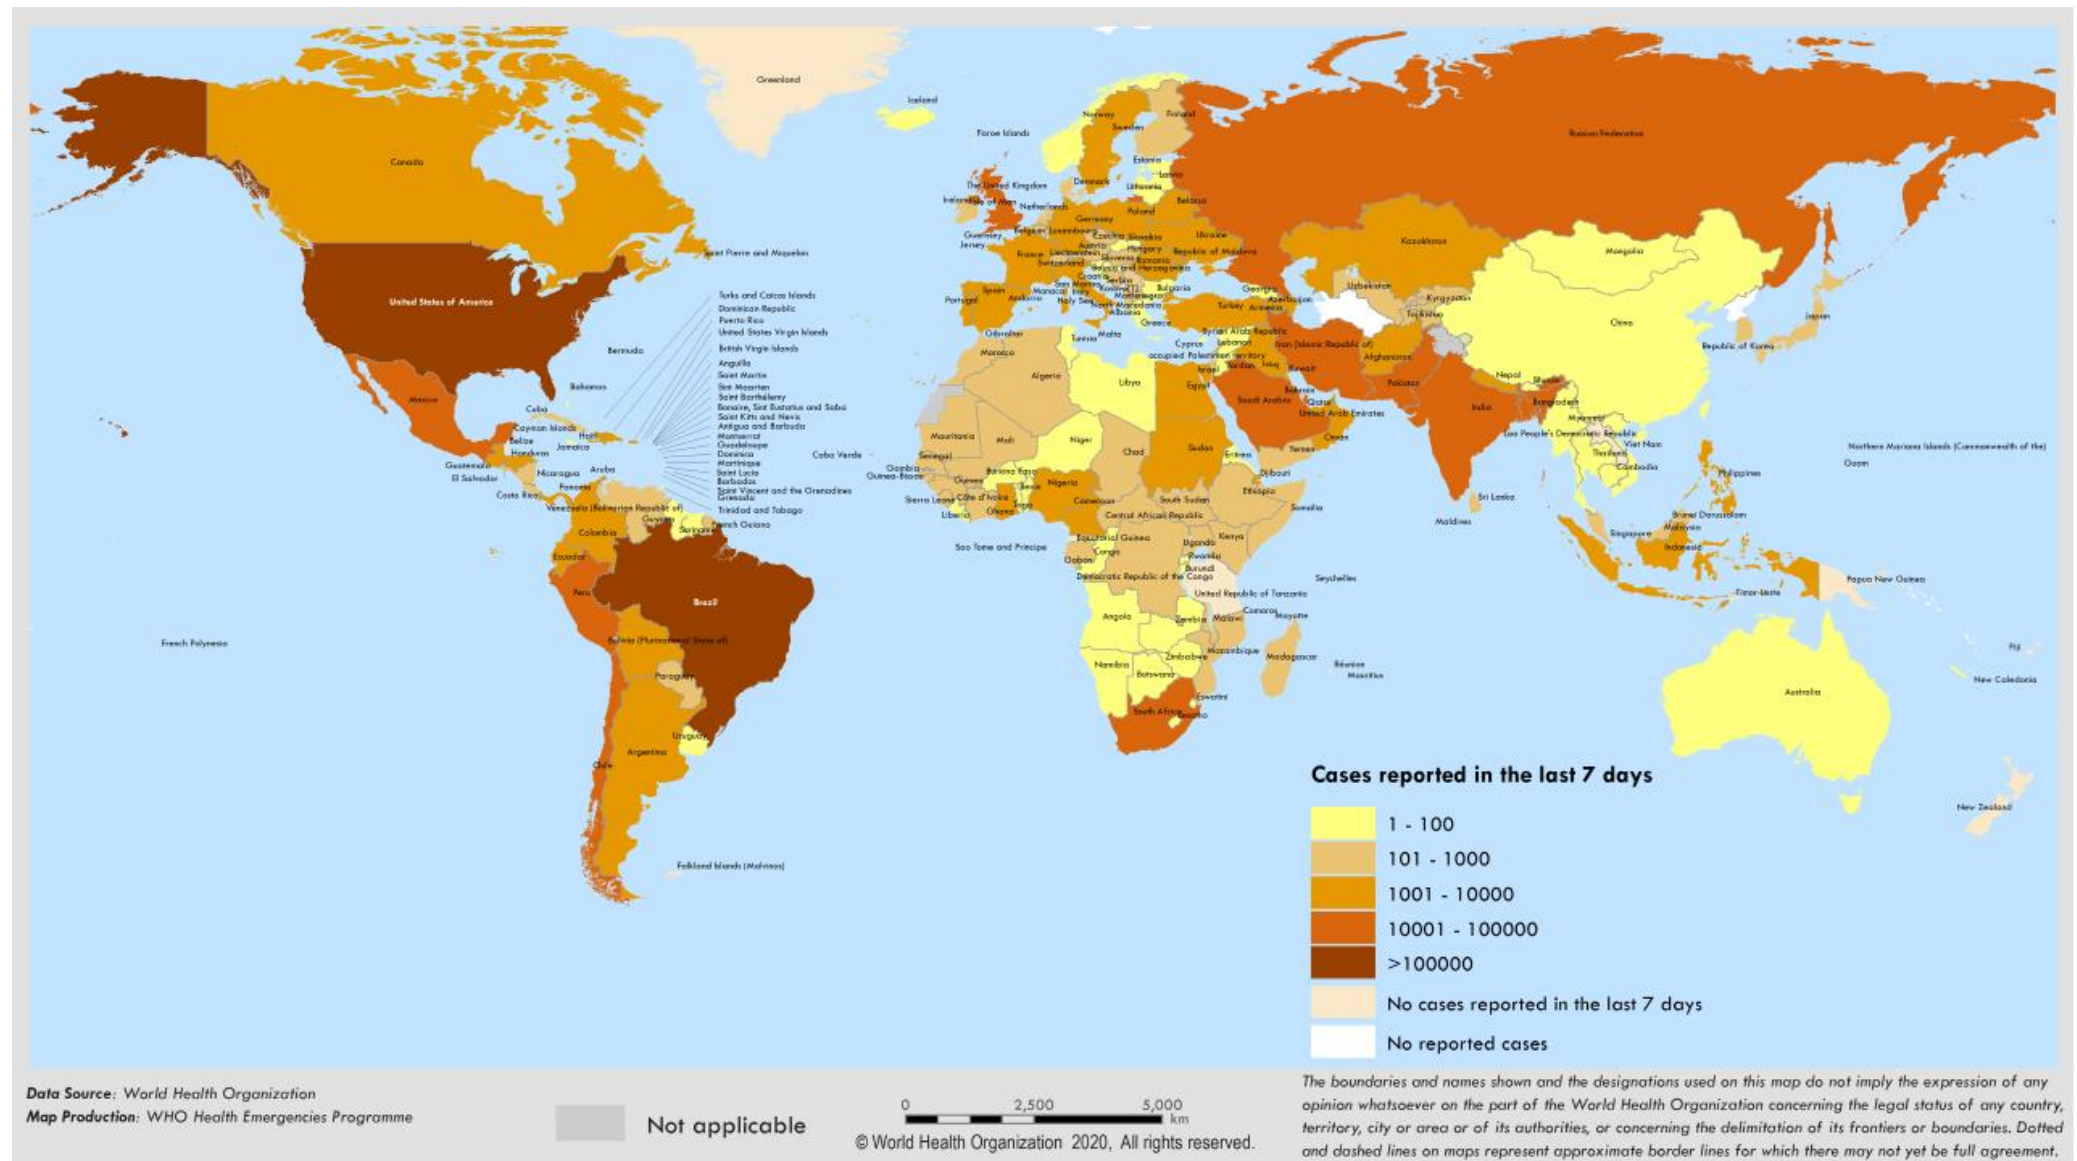

The second section describes, in four operational modules, the risk mitigation measures applicable to airport, aircraft, crew and cargo.

When implementing these measures, care should be taken to follow all applicable laws, regulations, requirements, standards, and guidance issued by relevant sub-national, national and international authorities. Nothing in these guidelines is intended to supersede or contradict such requirements.

ICAO endorses a phased approach to make possible the safe return to high-volume domestic and international air travel for passengers and cargo. Risk-based stages for mitigation measures will also contribute to the efficient, safe, secure, and sustainable transport by air of an increasing number of passengers and cargo.

Surveillance

Figure 1. Number of confirmed COVID-19 cases reported in the last seven days by country, territory or area, 30 May to 05 June**

**See [Annex 1](#) for data, table and figure notes.

Figure 2. Number of confirmed COVID-19 cases, by date of report and WHO region, 30 December 2019 through 05 June 2020**

**See [Annex 1](#) for data, table and figure notes.

Table 1. Countries, territories or areas with reported laboratory-confirmed COVID-19 cases and deaths, by WHO region. Data as of 10 AM CEST, 05 June 2020**

Case definitions

WHO periodically updates the [Global Surveillance for human infection with coronavirus disease \(COVID-19\)](#) document which includes surveillance definitions.

Definition of COVID-19 death

COVID-19 death is defined for surveillance purposes as a death resulting from a clinically compatible illness in a probable or confirmed COVID-19 case, unless there is a clear alternative cause of death that cannot be related to COVID-19 disease (e.g. trauma). There should be no period of complete recovery between the illness and death.

Further guidance for certification and classification (coding) of COVID-19 as cause of death is available [here](#).

Annex 1: Data, table and figure notes

Caution must be taken when interpreting all data presented. Differences are to be expected between information products published by WHO, national public health authorities, and other sources using different inclusion criteria and different data cut-off times. While steps are taken to ensure accuracy and reliability, all data are subject to continuous verification and change. Case detection, definitions, testing strategies, reporting practice, and lag times differ between countries/territories/areas. These factors, amongst others, influence the counts presented, with variable underestimation of true case and death counts, and variable delays to reflecting these data at global level.

The designations employed, and the presentation of these materials do not imply the expression of any opinion whatsoever on the part of WHO concerning the legal status of any country, territory or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted and dashed lines on maps represent approximate border lines for which there may not yet be full agreement. Countries, territories and areas are arranged under the administering WHO region.

The mention of specific companies or of certain manufacturers' products does not imply that they are endorsed or recommended by WHO in preference to others of a similar nature that are not mentioned. Errors and omissions excepted, the names of proprietary products are distinguished by initial capital letters.

[¹] All references to Kosovo should be understood to be in the context of the United Nations Security Council resolution 1244 (1999). In the map, number of cases of Serbia and Kosovo (UNSCR 1244, 1999) have been aggregated for visualization purposes.

Counts reflect laboratory-confirmed cases and deaths, based on [WHO case definitions](#), unless stated otherwise (see Country, territory, or area-specific updates and errata), and include both domestic and repatriated cases.

Other*: includes cases reported from international conveyances.

Due to the recent trend of countries conducting data reconciliation exercises which remove large numbers of cases or deaths from their total counts, WHO will now display such data as negative numbers in the "new cases" / "new deaths" columns as appropriate. This will aid readers in identifying when such adjustments occur. When additional details become available that allow the subtraction to be suitably apportioned to previous days, graphics will be updated accordingly. Prior situation reports will not be edited; see covid19.who.int for the most up-to-date data.

Additional table notes

ⁱ Transmission classification is based on a process of country/territory/area self-reporting.

Classifications are reviewed on a weekly basis, and may be revised as new information becomes available. Differing degrees of transmission may be present within countries/territories/areas; classification is based on the highest category reported within a country/territory/area. Categories:

- No cases: with no confirmed cases
- Sporadic cases: with one or more cases, imported or locally detected.
- Clusters of cases: experiencing cases, clustered in time, geographic location and/or by common exposures.

- Community transmission: experiencing larger outbreaks of local transmission defined through an assessment of factors including, but not limited to: large numbers of cases not linkable to transmission chains; large numbers of cases from sentinel lab surveillance; and/or multiple unrelated clusters in several areas of the country/territory/area.
- Pending: transmission classification has not been reported to WHO.

ii “Territories” include territories, areas, overseas dependencies and other jurisdictions of similar status.

Country, territory, or area-specific updates and errata

- **Update 5 June 2020, Spain:** Counts adjusted retrospectively by national authorities: 807 deaths were excluded.
